

## EECS2040 Data Structure Hw #5 (Chapter 6 Graph)

due date 6/6/2021 (Part 1)

by 107061123, 孫元駿

### Part 1

- (10%) Does the multigraph below have an Eulerian walk? If so, find one.

Ans: Yes, it has an Eulerian walk.  $0 \rightarrow 3 \rightarrow 2 \rightarrow 3 \rightarrow 2 \rightarrow 0 \rightarrow 1 \rightarrow 0$

- (10%) For the digraph below obtain

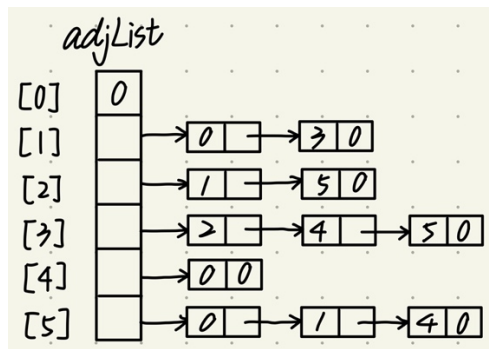

(a) The in-degree and out-degree of each vertex

vertex	in-degree	out-degree
0	3	0
1	2	2
2	1	2
3	1	3
4	2	1
5	2	3

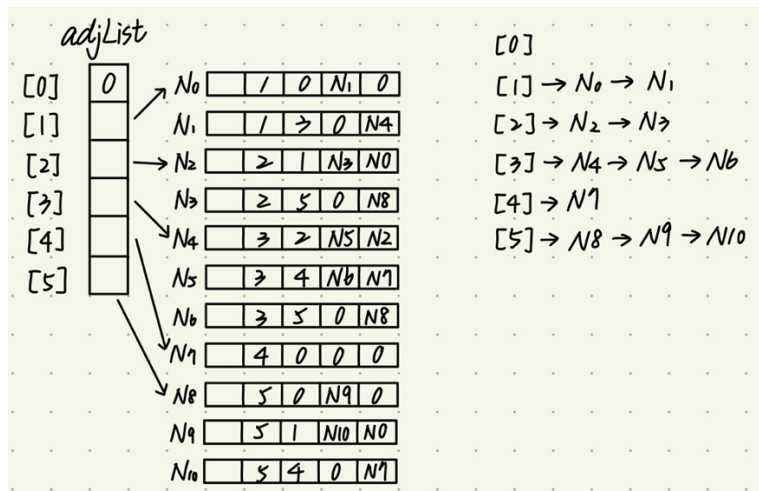

(b) Its adjacency-matrix

$$\begin{matrix}
 & \begin{matrix} 0 & 1 & 2 & 3 & 4 & 5 \end{matrix} \\
 \begin{matrix} 0 \\ 1 \\ 2 \\ 3 \\ 4 \\ 5 \end{matrix} & \left[ \begin{array}{cccccc}
 0 & 0 & 0 & 0 & 0 & 0 \\
 1 & 0 & 0 & 1 & 0 & 0 \\
 0 & 1 & 0 & 0 & 0 & 1 \\
 0 & 0 & 1 & 0 & 1 & 1 \\
 1 & 0 & 0 & 0 & 0 & 0 \\
 1 & 1 & 0 & 0 & 1 & 0
 \end{array} \right]
 \end{matrix}$$

(c) Its adjacency-list representation

(d) Its adjacency-multilist representation

(e) Its strongly connected components

3. (10%) Is the digraph below strongly connected? List all the simple paths.

Ans: Yes, it is strongly connected.

From 0 to 0:  $0 \rightarrow 1 \rightarrow 2 \rightarrow 0$  or  $0 \rightarrow 3 \rightarrow 2 \rightarrow 0$

From 0 to 1:  $0 \rightarrow 1$

From 0 to 2:  $0 \rightarrow 1 \rightarrow 2$  or  $0 \rightarrow 3 \rightarrow 2$

From 0 to 3:  $0 \rightarrow 3$

From 1 to 0:  $1 \rightarrow 2 \rightarrow 0$

From 1 to 1:  $1 \rightarrow 2 \rightarrow 0 \rightarrow 1$

From 1 to 2:  $1 \rightarrow 2$

From 1 to 3:  $1 \rightarrow 2 \rightarrow 0 \rightarrow 3$

From 2 to 0:  $2 \rightarrow 0$

From 2 to 1:  $2 \rightarrow 0 \rightarrow 1$

From 2 to 2:  $2 \rightarrow 0 \rightarrow 1 \rightarrow 2$  or  $2 \rightarrow 0 \rightarrow 3 \rightarrow 2$

From 2 to 3:  $2 \rightarrow 0 \rightarrow 3$

From 3 to 0:  $3 \rightarrow 2 \rightarrow 0$

From 3 to 1:  $3 \rightarrow 2 \rightarrow 0 \rightarrow 1$

From 3 to 2:  $3 \rightarrow 2$

From 3 to 3:  $3 \rightarrow 2 \rightarrow 0 \rightarrow 3$

4. (10%) Draw the complete undirected graphs on one, two, three, four, and five vertices. Prove that the number of edges in an  $n$ -vertex complete graph is  $n(n-1)/2$ .

prove :

Every Vertex connect to all the other vertices except itself, so every vertex have  $n-1$  degree  
 And have  $n$  vertices, so  $n(n-1)$  edges  
 but  $a$  to  $b$  is same as  $b$  to  $a$  so divide  $\div$   
 then get  $\frac{n(n-1)}{2}$  edges \*

5. (10%) Apply **depth-first** and **breadth-first** searches to the **complete graph on four vertices**. Assume that vertices are numbered 0 to 3, are stored in increasing order in each list in the adjacency-list representation, and both traversals begin at vertex 0. List the vertices in the order they would be visited.

Ans:

DFS:  $0 \rightarrow 1 \rightarrow 2 \rightarrow 3$

BFS:  $0 \rightarrow 1 \rightarrow 2 \rightarrow 3$

6. (20%) Use ShortestPath (Program 6.8) to obtain, in nondecreasing order, the **lengths** and the **paths** of the shortest paths from vertex 0 to all remaining vertices in the graph below.

paths	lengths
$0 \rightarrow 2$	15
$0 \rightarrow 2 \rightarrow 3$	19
$0 \rightarrow 1$	20
$0 \rightarrow 2 \rightarrow 5$	25
$0 \rightarrow 1 \rightarrow 4$	30

7. (10%) Using the directed graph below, explain why ShortestPath (Program 6.8) will not work properly. What is the shortest path between vertices 0 and 6?

Ans: Because there is a negative edge cost in the graph so the ShortestPath will not work. For example, the shortest path from 0 to 1, by Shortedtpath, we will get the length 2, but actually, the shortest path is 1, and the path is  $0 \rightarrow 2 \rightarrow 1$ .

The shortest path from 0 to 6 is  $0 \rightarrow 2 \rightarrow 1 \rightarrow 3 \rightarrow 4 \rightarrow 6$ , and the length is 8.

paths	lengths
$0 \rightarrow 2 \rightarrow 1$	1
$0 \rightarrow 2$	3
$0 \rightarrow 2 \rightarrow 1 \rightarrow 3$	5
$0 \rightarrow 2 \rightarrow 1 \rightarrow 3 \rightarrow 4$	6
$0 \rightarrow 2 \rightarrow 1 \rightarrow 3 \rightarrow 5$	7
$0 \rightarrow 2 \rightarrow 1 \rightarrow 3 \rightarrow 4 \rightarrow 6$	8

8. (10%) Does the following set of precedence relations ( $<$ ) define a **partial order** on the elements 0 through 4? Why?

$$0 < 1; 1 < 3; 1 < 2; 2 < 3; 2 < 4; 4 < 0$$

Ans: No, we get  $0 < 4$  from  $0 < 1 < 2 < 3 < 4$ , but  $4 < 0$ , then it is not irreflexive, so it is not partial order.

9. (10%) For the AOE network shown below,
- Obtain the early,  $e(a_i)$ , and late,  $l(a_i)$ , start times for each activity. Use the forward-backward approach.
  - What is the earliest time the project can finish?
  - Which activities are critical? **Fill the table below for answers to (a), (b), and (c).**
  - Is there any single activity whose speed-up would result in a reduction of the project finish time?

activity	Early time	Late time	slack	critical
	$e(a_i)$	$l(a_i)$		
a <sub>1</sub>	0	4	4	X
a <sub>2</sub>	0	0	0	V
a <sub>3</sub>	5	9	4	X
a <sub>4</sub>	6	6	0	V
a <sub>5</sub>	6	12	6	X
a <sub>6</sub>	12	12	0	V
a <sub>7</sub>	12	15	0	X
a <sub>8</sub>	12	15	3	V
a <sub>9</sub>	12	12	0	V
a <sub>10</sub>	15	15	0	V
a <sub>11</sub>	16	16	0	V
a <sub>12</sub>	19	19	0	V
a <sub>13</sub>	16	19	3	X
a <sub>14</sub>	21	21	0	V

Ans:

(b) 23

(d)  $a_2$  ,  $a_4$  ,  $a_{14}$
